

TANK LIDS AND ACCESSORIES

TAPAS Y ACCESORIOS

Various types of lids, hinged up to 180°, threaded or bayonet lock, can be used, along with the filter baskets, with the largest range of different sizes and configuration of tanks.

The lids are made of U.V. resistant Polypropylene to offer an almost unlimited life.

Tapas de diferentes tipos, roscadas, de bayoneta o incluso rebatible a 180°, pueden aplicarse, junto a los filtros de fondo, en los tanques de las más variadas medidas y configuraciones.

Las tapas son realizadas en Polipropileno resistente a los rayos U.V. para asegurar una duración prácticamente ilimitada en el tiempo.

HINGED TANK LIDS TAPAS REBATIBLES

Tank overturning lid 180°

Overturning lid 180° with fixing ring to the tank.

- Labyrinth breather version.
- Air valve with float version to work on sloped ground.
- Closed version.
- Available with and without blocking.
- Available with lateral fixing and for flat surfaces.
- Seal on the lid as standard.
- **Ring gasket which must be ordered separately.**
- Bayonet blocking system on six points for perfect lockup.
- 180° overturn to prevent stress on lid and tank.
- Possibility to mount the basket filter series made of plastic or steel of our production.

Tapa rebatible 180° para tanque

Tapa rebatible 180° con anillo de fijación al tanque.

- Versión con ventilación en forma de laberinto.
- Versión con válvula de aireación con flotador para trabajos en terrenos con pendientes.
- Versión cerrada.
- Disponibles con y sin bloqueo.
- Disponibles ya sea con fijación lateral o para superficies planas.
- Junta de estanqueidad de serie en la tapa.
- **Junta superior que debe ordenarse por separado.**
- Bloqueo tipo bayoneta en seis puntos para un cierre perfecto.
- Apertura 180° para evitar esfuerzos sobre la tapa y sobre el depósito.
- Posibilidad de montar la serie de filtros de cesta de plástico o de acero de nuestra producción.

MISTRAL

GHIBLI

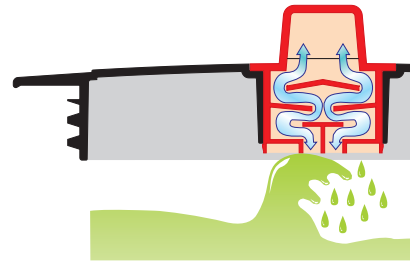

The vent circuit of **Mistral** and **Ghibli** has been computer designed to guarantee a large flow yet avoiding liquid out flow.

El recorrido de las válvulas a laberinto **Mistral** y **Ghibli** ha sido estudiado y optimizado para consentir un amplio paso de aire e impedir, mientras tanto, la posible salida de líquido del depósito.

MISTRAL

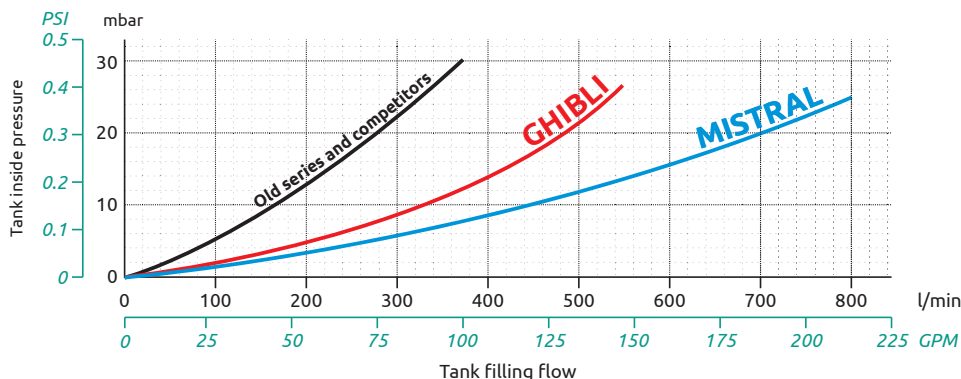

GHIBLI

The new breather valves **Mistral** and **Ghibli** feature a great flow allowing fast tank filling with big pumps. See the flow diaphragm lines (red and blue) definitely more performant than the black line referred to our old series and to the competition's flow.

Las nuevas válvulas de laberinto **Mistral** y **Ghibli** se caracterizan por una gran capacidad de descarga del aire, para consentir un rápido llenado del depósito. En el gráfico pueden apreciarse las curvas (roja y azul) evidentemente más bajas, y por lo tanto con mejores prestaciones, respecto a la serie anterior (curva negra).

SMOOTH LINE 2

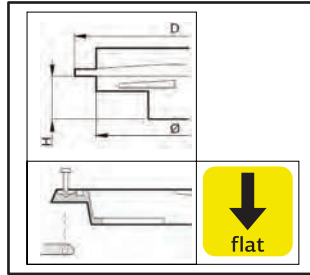

MISTRAL

"Smooth-line 2" threaded lids with removable labyrinth breather "MISTRAL"

Made to current anti-pollution standards, the lid is equipped with a double breather valve to empty the tank quickly with the lid closed, even with a high-delivery pump.

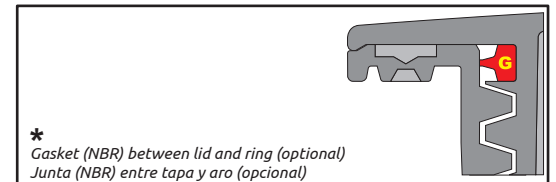

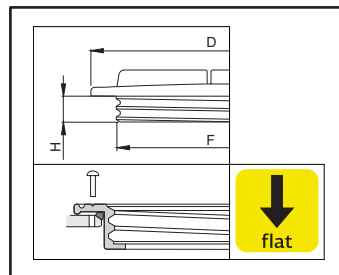

Tapas roscadas serie "Smooth-line 2" con respiradero de laberinto extraíble "MISTRAL"

Realizada según las actuales normas anticontaminación, está provista de un grupo válvula de doble respiradero que permite el vaciado rápido de la cisterna con la tapa cerrada, incluso con bombas de gran caudal.
