

ORSY®BULL

The secret's in the system.

ORSY®BULL is one of Würth's own developments. With just a few boxes, ORSY®BULL gives you an unbelievably stable and extremely mobile all-rounder that provides superb flexibility.

In just seconds, a tool and small-parts storage area is turned into an item of mobile vehicle equipment system or a workbench at a construction site. Regardless of what you demand from the system, the box can handle it!

The innovations at a glance

Intelligent:

Problem-free vertical stacking and secure interlocking of the boxes thanks to the refined connecting mechanism

Strong:

Even greater stability thanks to impact-resistant side parts made of high-quality plastic, distortion-free and corrosion-free. The boxes can be loaded with up to 100 kg, and the lid of the Toploader Box can withstand a load of 120 kg.

Practical:

Large, ergonomically shaped handles for high carrying comfort without painful cutting into your hands

Useful:

Easy locking and unlocking thanks to a special sliding mechanism

Safe ...

The vertically stacked boxes are secure thanks to the clever anti-theft protection - a combination of a lock and lock holder, available as accessories.

... and secure

Every box can be fitted with its own lock (included in the scope of delivery for drawer boxes and combination boxes) to prevent access to the contents. See "Accessories".

Well thought through:

Raised stand for easy transport with a wheelbarrow and protection against dirt. Extra device for securing wheels.

Refined:

Attractive high-strength, easy to care for aluminum design: extremely robust, stainless and wonderfully light
